

BACTERIAL SOYBEAN INOCULANT

A 3-strain liquid rhizobia inoculant for nitrogen fixation in Soybeans. Nitrogen is an essential element required in large quantities by leguminous plants for growth. Although nitrogen is available in the atmosphere it is unusable and unavailable for plants. Induct[®] Soybean has been scientifically developed for legume crops to support consistent and reliable biological nitrogen fixation, thereby making an otherwise unavailable nutrient, available.

CROPS

Soybean

PACKAGING

4 x 40 Unit Case

54.1 fl. oz (1.6 L) Induct[®] Soybean

2 x 200 Unit Case

2 x 270.5 fl. oz (8 L) Induct[®] Soybean

APPLICATION TIMING

Treat seed and plant within 24 hours. In-furrow at planting.

SHELF LIFE

18 Months

RATE

Seed treatment:
Apply 2.7 fl. oz (80 ml)/cwt

STATE AVAILABILITY

IA, IN, MN, MO, KS,
ND, NE, SD.

COMPATIBILITY:

Compatible with most seed care products. Contact an MBFi representative for the latest compatibility chart.

18 MONTHS SHELF LIFE

**VERY EFFECTIVE
3-STRAIN FORMULATION**

**100% *BRADYRHIZOBIUM
JAPONICUM* LIQUID CULTURE**
