

SAXSYM™ PRIORITY® PLUS CORN

PLANT GROWTH PROMOTION AND ROOT DEVELOPMENT

The Priority® Plus formulation combines all the benefits of Priority DS Corn with added vital micronutrients **Zinc, Iron, Manganese, Cobalt and Molybdenum**. The addition of these vital micronutrients to the formulation ensures that they are available to the seed at planting and to the developing roots once germination has begun.

100% AVAILABLE MICRONUTRIENTS

- Support early plant establishment
- Support root development

PLANT BIOSTIMULANT

- SAR Trigger
- Plant growth promotion
- Promotes seedling emergence and vigor

SUPERIOR SEED LUBRICANT

- Premium seed flowability
- Reduces bridging
- Better seed dry off

PACKAGING

2 x 50 unit pails
2 x 100 oz (2.84 kg)

APPLICATION TIMING

Apply to seed as a planter box treatment or post-seed treatment via seed treatment equipment, including finishing powder application or load-out conveyor treatment using a dry powder applicator.

Corn

- 1 Production of plant growth hormones (e.g., Auxin) by *Trichoderma asperellum*.
- 2 Reduction in ethylene levels due to enzymatic action of *Trichoderma asperellum*, resulting in root elongation.
- 3 Through the release of unavailable nutrients like phosphates, iron, copper, manganese, and zinc for plant uptake.
- 4 Production of secondary metabolites involved in plant growth promotion.
- 5 Improves water and nutrient uptake as a result of better root architecture.

Precautionary statements:

Read the label before use. If medical advice is needed, have a product container or label nearby. Wash protective equipment and work clothes thoroughly after handling the product.
